

# Facade drainage slot

**For effective drainage of fluids from vertical surfaces**

Modular system intended for effective drainage of fluids from vertical surfaces. It is used to drain the polluted water, chemicals, and other sorts of liquids with possibility to capture the fluids in ordinary retention berms. To prevent leakages of such fluids into the environment, or sewer system and other spaces.

- ▶ Split-second readiness
- ▶ Easy application without damaging of masonry

The metal body of the modular element is equipped with special rubber foam profile that seals the fixed joint of the drainage slot and the wall. Fluid removal is ensured by the highly resistant cover made of plastic coated fabric.

One-meter-long elements may be fitted together into a drain of an unlimited length

Stacking elements

To capture various sorts of liquids we suggest using retention berms ET or CARGO

As a supplement to prevent the fluid leakages in the joints of the retention berms, a coupling element is included

Specifications

<b>Dimensions</b>	16 × 18 × 43 in
<b>Modular element length</b>	43 in
<b>Pack size of 1–10 modular elements</b>	pallet 47 × 31 × 24 in
<b>Modular weight</b>	24 lb
