Folding Spill Containment Berm DRIVE THROUGH 9370

335 × 146 × 12

Portable folding drive-through spill containment berm made of highly mechanically resistant ReccoPro HardGuard material. Ideal for repeated entries, exits and for capturing emergency leaks, e.g. when pumping from tanks or cisterns, when washing or decontaminating vehicles, machines, construction equipment, etc.

- ▶ Highly mechanically resistant recyclable ReccoPro HardGuard material – abrasion and puncture resistance
- ▶ The berm is suitable for repeated entry and exit
- ▶ Fast and easy set up without tools
- ▶ Fast Smart-Up Lock system for folding side supports
- ▶ Patented method of securing corners – Leak Proof Seal screws with a seal – prevents leakage even when the berm is filled to full capacity
- ▶ Wall supports with integrated holes for anchoring the berm to the floor
- ▶ The safe design of the berm and wall supports provides unobstructed work space, allows free and safe movement of people, equipment and vehicles inside and outside the berm – protection against tripping or falling
- ▶ Removable side supports increase comfort when handling the unfolded berm and save space when storing it

Extremely durable drive-through spill containment berm ideal for repeated entry and exit, for decontamination, washing and cleaning of vehicles or equipment, for pumping, etc.

The containment berm can be set up by a single person

Folded side for easy entry into the berm

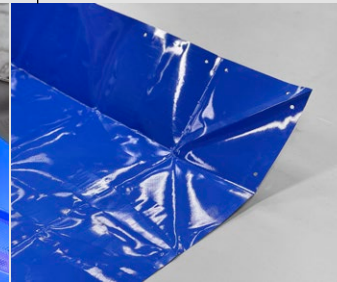

Smart-Up Lock supports withstand repeated vehicle drive-overs

In case of damage, the Smart-Up Lock wall supports can be easily and quickly replaced

Easy maintenance of the berm thanks to the possibility of simple corner layout

Leak Proof Seal screws with seals prevent liquid leakage even when the berm is filled to the maximum with liquid

Technical details

The DRIVE THROUGH foldable spill containment berm is made of extremely durable recyclable ReccoPro HardGuard material with high mechanical resistance against abrasion and puncture. The berm is suitable for repeated entry of handling equipment or vehicles. The containment berm is supplied with dismantled wall supports, which minimizes the size of the package when the berm is not in use and allows for more comfortable and less physically demanding handling. Additional installation of the wall supports is very fast, smooth and without the use of tools. The Smart-Up Lock system of the wall supports ensures lightning-fast positioning of the sidewalls to a 90° vertical position and equally fast folding to a horizontal position, which allows for comfortable drive-in and out. The supports prevent sagging of the sides and are equipped with holes for anchoring to the ground under high wind conditions. The temperature range of use of the spill containment berm is -22 °F to +158 °F.

The berm is available in several dimensional variants. Thanks to the low profile of the berm and the chemical resistance of the material used, it can also be used as a decontamination site.

Smart-Up Lock wall supports folding system

Smart-Up Lock is a patented design system of folding wall supports that can be locked in a 90° vertical position with one movement. This system allows for the same quick and easy folding back to a horizontal position for convenient and easy drive-in and out or handling equipment into the berm. The folding wall supports also have integrated holes for anchoring the berm to the ground in the event of strong winds or other pressure on the side of the berm. In case of damage, the wall supports can be easily and quickly replaced.

Leak Proof Seal screws

The corner construction secured in the upper part of the berm with special Leak Proof Seal screws with a seal ensures 100% protection against leakage even when the berm is filled to the maximum with liquid.
