Folding Spill Containment Berm IBC 6

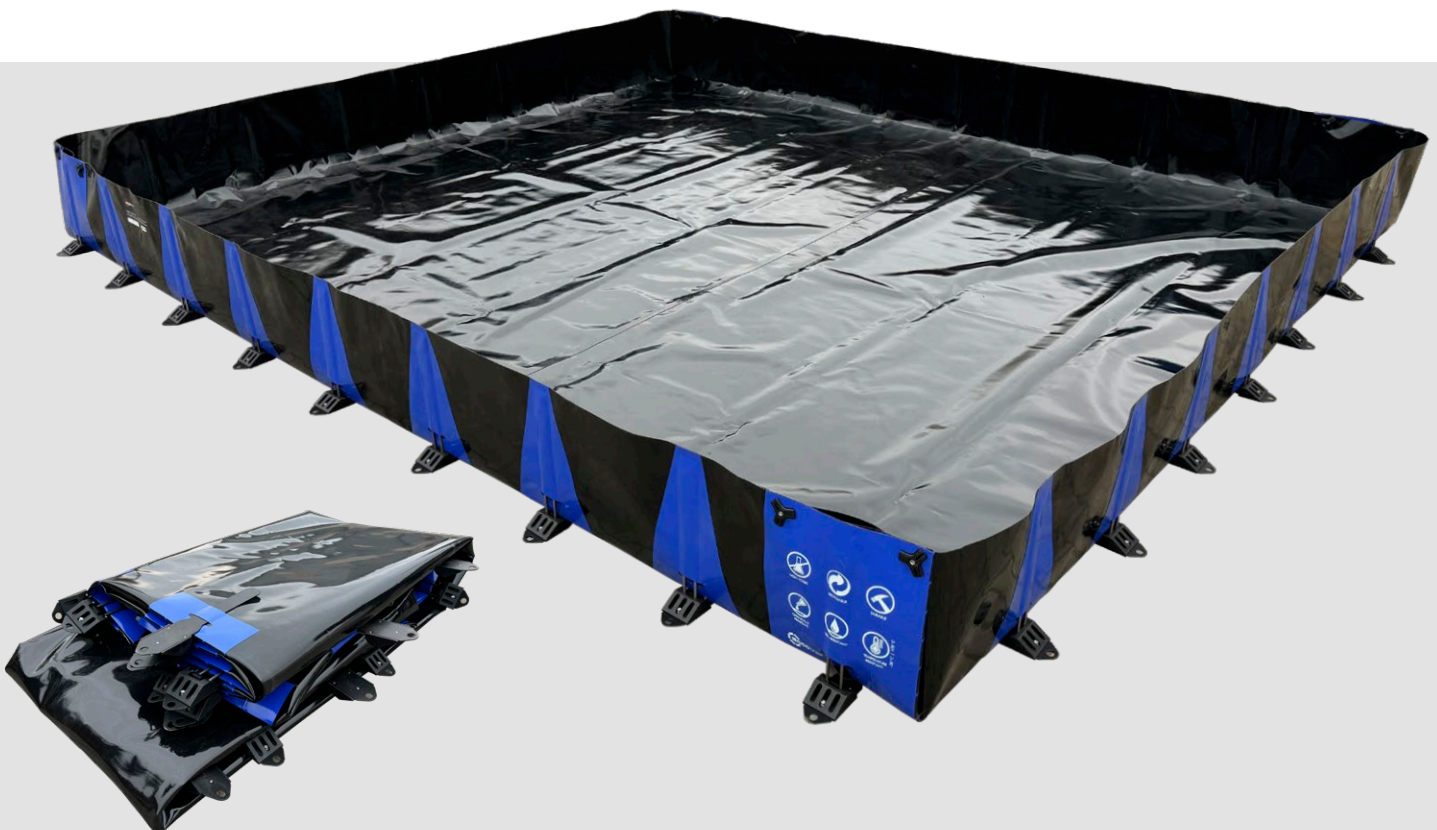

3600 × 3200 × 350

Folding Spill Containment Berm designed to capture hazardous leaks from IBC containers or other similar vessels used for storing dangerous substances. The dimensions of each model in this product range are tailored to accommodate a specific number of IBC containers, from 1 to 10 units. Easily portable and quickly assembled without the use of tools. The special Smart-Up Lock system of wall supports allows for immediate folding of the sides for convenient manipulation inside the berm or for limited vehicles drive in/out. Ideal for use in industrial halls, etc.

**Mechanically resistant
Containment Berm designed
for storing hazardous
substances in IBC containers**

- ▶ Variants for storage of 1–10 IBC containers
- ▶ Highly mechanically resistant recyclable ReccoPro HardGuard material – abrasion and puncture resistance
- ▶ Fast and easy set up without tools
- ▶ Smart-Up Lock wall support folding system for quick folding and positioning of the berm sides
- ▶ Patented method of securing corners – Leak Proof Seal screws with a seal - prevents leakage even when the berm is filled to full capacity
- ▶ Wall supports with integrated holes for anchoring the berm to the floor
- ▶ The safe design of the berm and wall supports provides unobstructed work space, allows free and safe movement of people, equipment and vehicles inside and outside the berm – protection against tripping or falling
- ▶ Foldable design and space-saving packaging save storage space and make transportation easier

Smart-Up Lock supports withstand repeated vehicle drive-overs

Easy drive in/out and handling inside the Berm thanks to the Smart-Up Lock system of folding wall supports

The IBC 6 Containment Berm is designed to store up to 6 IBC containers

In case of damage, the Smart-Up Lock wall supports can be easily and quickly replaced

Easy maintenance and cleaning thanks to the possibility of simple corner layout

Leak Proof Seal screws with seals prevent liquid leakage even when the berm is filled to the maximum with liquid

Technical details

The IBC Folding Spill Containment Berm is made of durable recyclable ReccoPro HardGuard material with high mechanical and chemical resistance. The containment berm is supplied with dismantled wall supports, which minimizes the size of the package when the berm is not in use and allows for more comfortable and less physically demanding handling. Additional installation of the wall supports is very fast, smooth and without the use of tools. The Smart-Up Lock system of the wall supports ensures lightning-fast positioning of the sidewalls to a 90° vertical position and equally fast folding to a horizontal position, which allows for comfortable drive-in and out, exit and manipulation inside the berm. The supports prevent sagging of the sides and are equipped with holes for anchoring to the ground under high wind conditions. The wall supports fold down in only one way, inward towards the inside of the berm. The special Leak Proof Seal system of locking the corners of the berm with screws with a seal prevents leakage during full containment for fluid-tight reliability. The temperature range of use of the spill containment berm is -30 °C to +70 °C. The berm is available in several dimensional variants. Available in multiple size variants for safe and efficient storage of 1–10 IBC containers or other similar hazardous substance containers.

Smart-Up Lock wall supports folding system

Smart-Up Lock is a patented design system of folding wall supports that can be locked in a 90° vertical position with one movement. This system allows for the same quick and easy folding back to a horizontal position for convenient and easy drive-in and out or handling equipment into the berm. The folding wall supports also have integrated holes for anchoring the berm to the ground in the event of strong winds or other pressure on the side of the berm. In case of damage, the wall supports can be easily and quickly replaced.

Leak Proof Seal screws

The corner construction secured in the upper part of the berm with special Leak Proof Seal screws with a seal ensures 100% protection against leakage even when the berm is filled to the maximum with liquid.
